GRANULAR

Part 1: What is economic resilience? Insights from the literature

Co-funded by
the European Union

ECONOMIC RESILIENCE

A regional and evolutionary perspective

General definition

a region's capacity to withstand and recover from economic shocks, such as natural disasters, market fluctuations, demographic decline or policy changes

Key aspects

- Conceptual fuzziness
- Dynamic nature
- Contextualised idea

ECONOMIC RESILIENCE

Contested assumptions

- Type of stressors
- Nature of stressors
- Exposed systems
- Responses

ECONOMIC RESILIENCE IN RURAL AREAS

Unique challenges in rural areas...

- Outmigration of young people
- Declining agricultural markets
- Climate Change
- Deficient infrastructures

... call for adaptive policy responses:

- Innovation systems
- Inclusivity
- Local communities are key

GRANULAR

Part 2: Rural Business Resilience: measuring economic diversity in rural areas

Co-funded by
the European Union

ECONOMIC DIVERSIFICATION IS KEY

GRANULAR

Why diversification matters for economic resilience?

- Risk reduction
- Employment stability
- Access to markets
- Local innovation
- Community development
- Social equity

WELCOME TO VALLENTUNA MUNICIPALITY, SWEDEN

Pop 34 119 (10.44 hab/km²)

DIVERSITY VS REDUNDANCY

A functional perspective on economic resilience

GRANULAR

Diversity – boosts general resilience at a system level (e.g. an economy)

VS

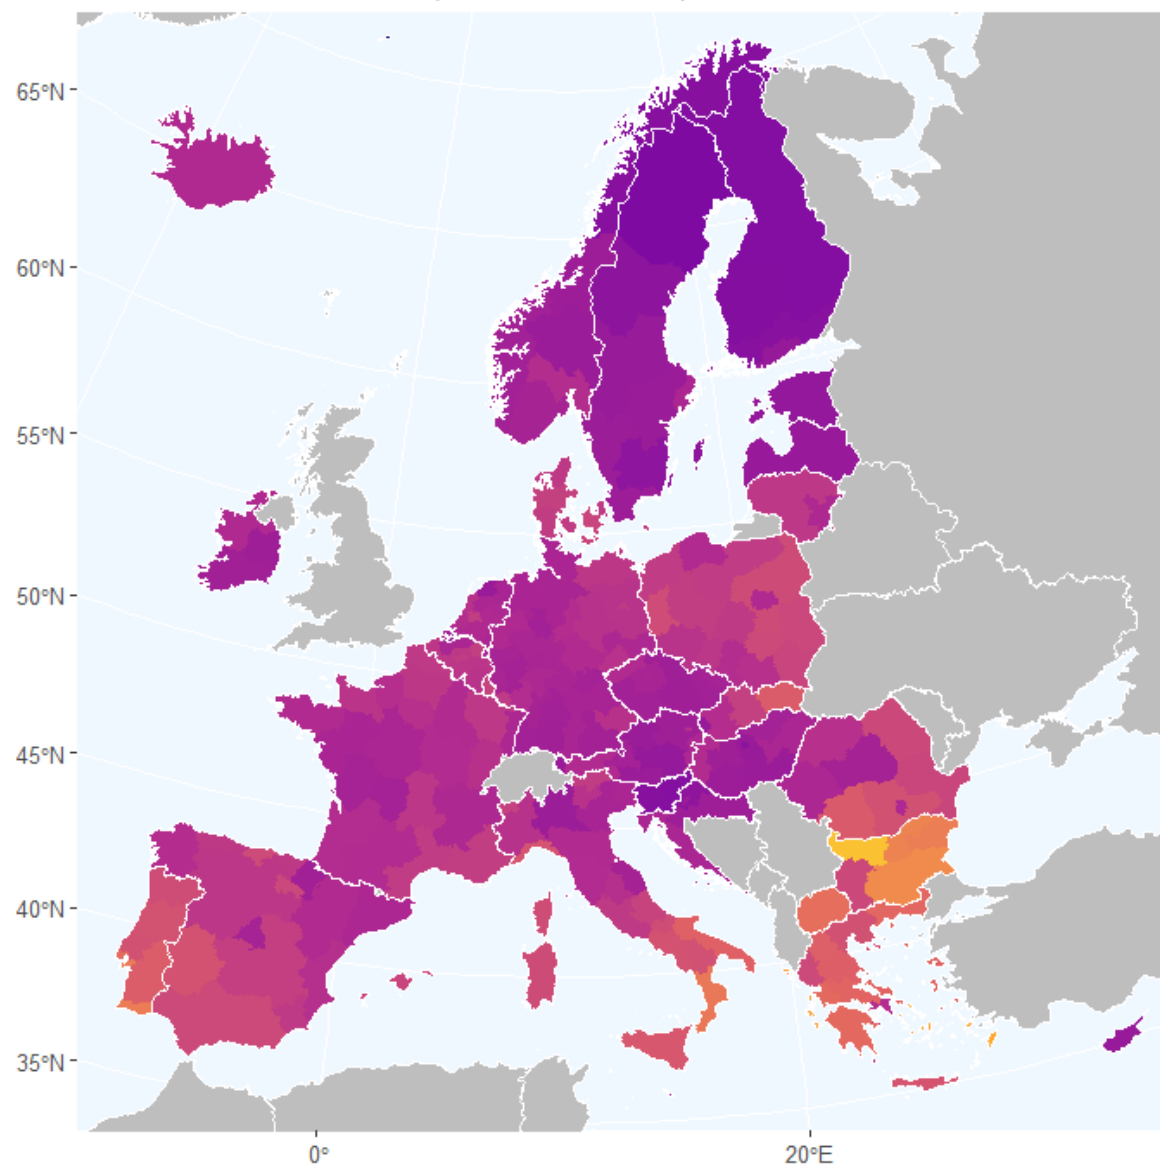

Redundancy – boosts resilience of specific system components (e.g. particular services)

MEASURING ECONOMIC DIVERSIFICATION

Functional Rural Areas (FRA)

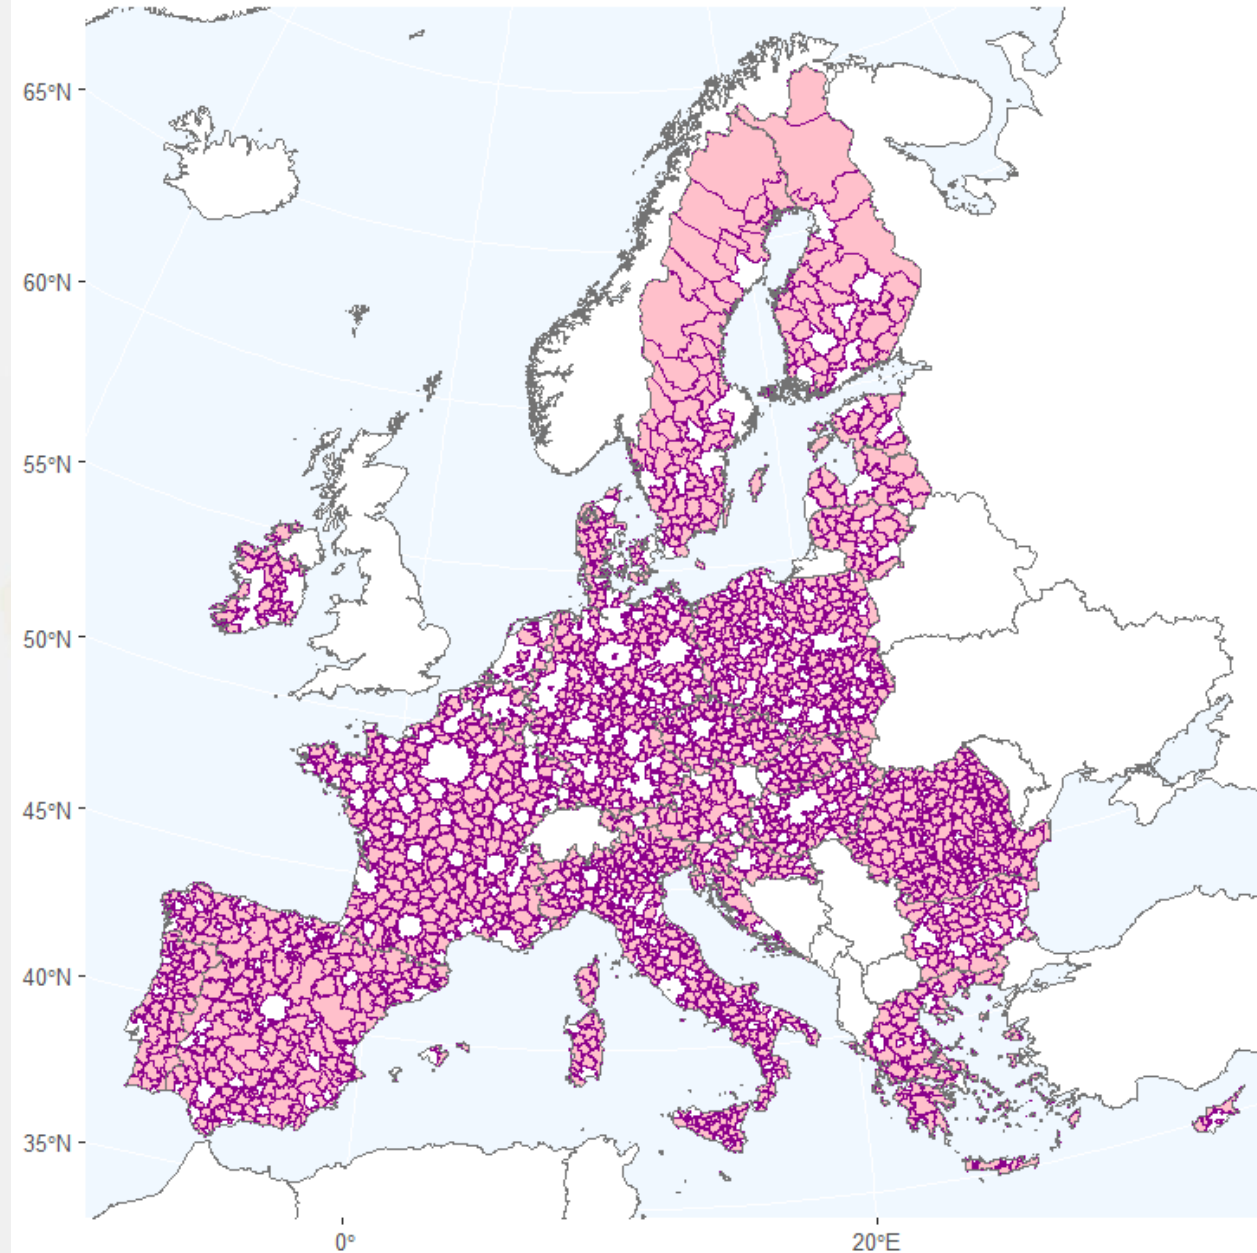

- Reflect functional rural systems
- Cover all territory **outside functional urban areas**

Each FRA:

- Contains at least one village or town
- Has at least 25,000 inhabitants
- FRAs less than 30 min. apart are combined

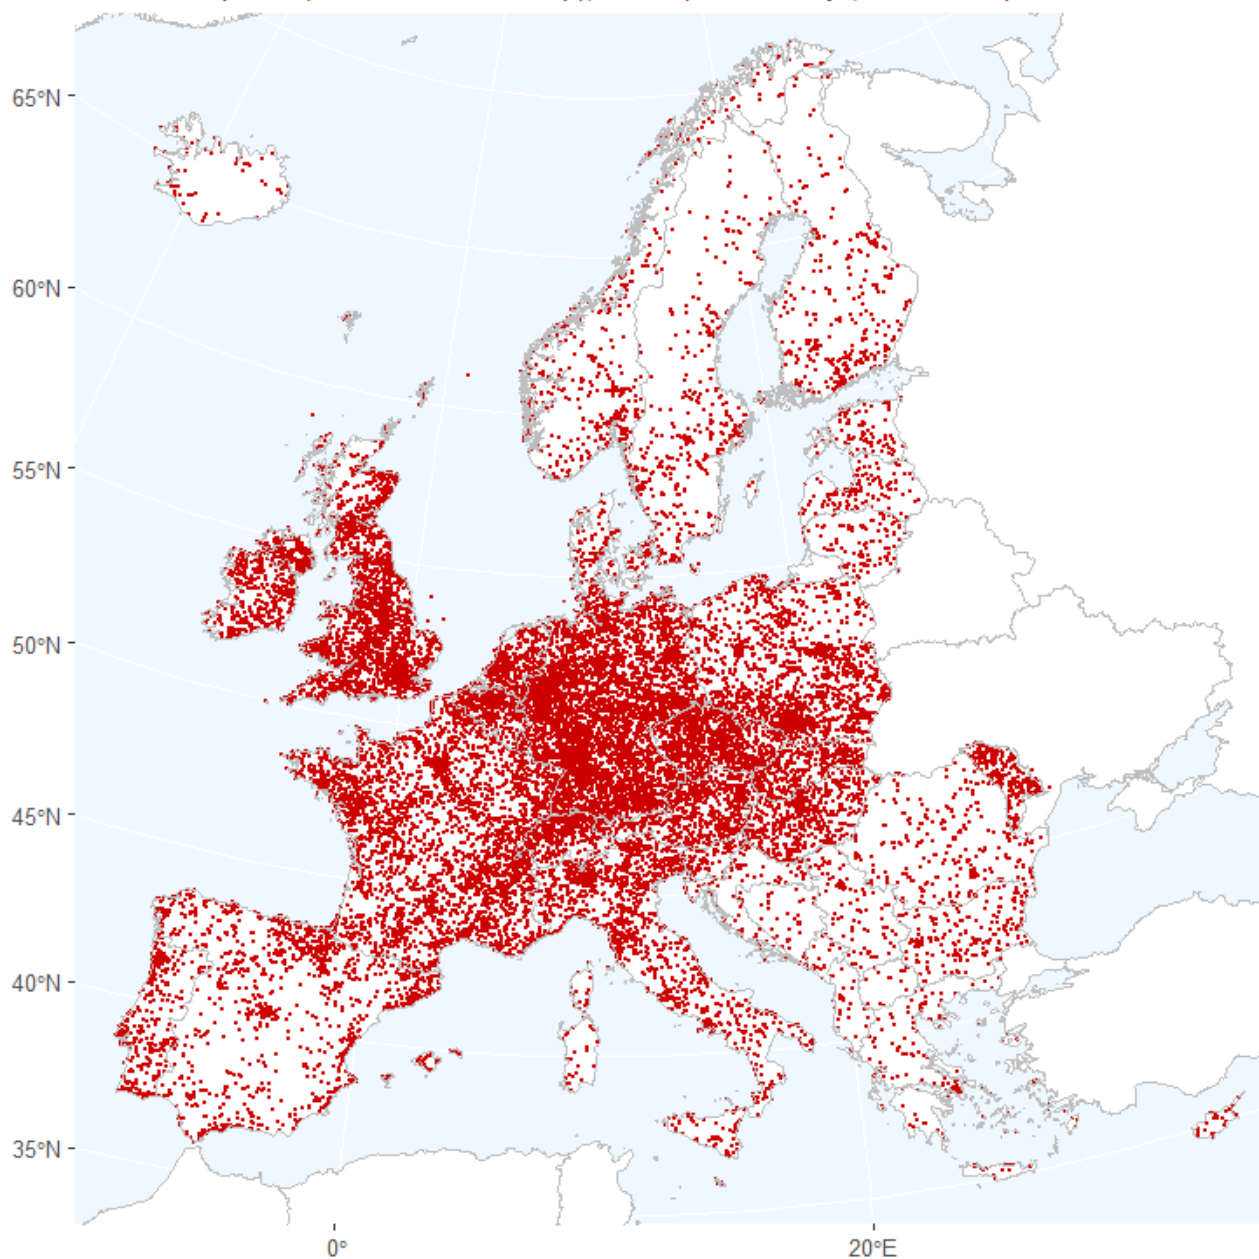

Functional Rural Areas (FRA)

25k, 30 to 60 minutes

OSM POIs with potential economic relevance (2025)

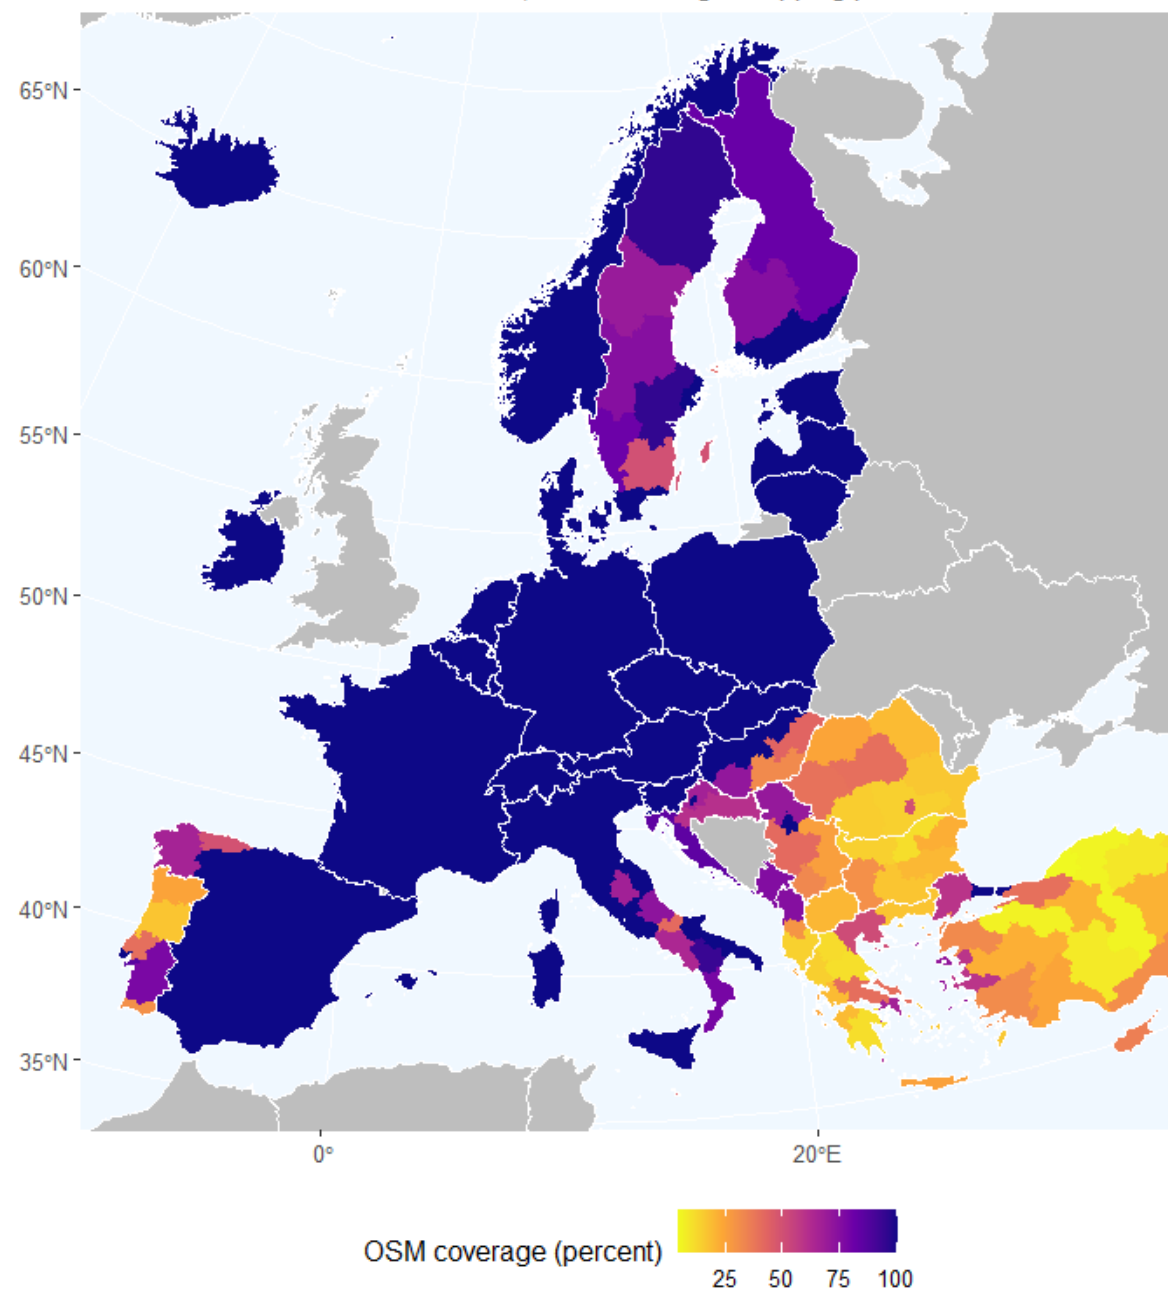

33 072 546 points (30 000 shown on map); 17 unique OSM keys; 12 411 unique OSM values

Source: OpenStreetMap

OSM coverage at NUTS-2 level relative to alternative services

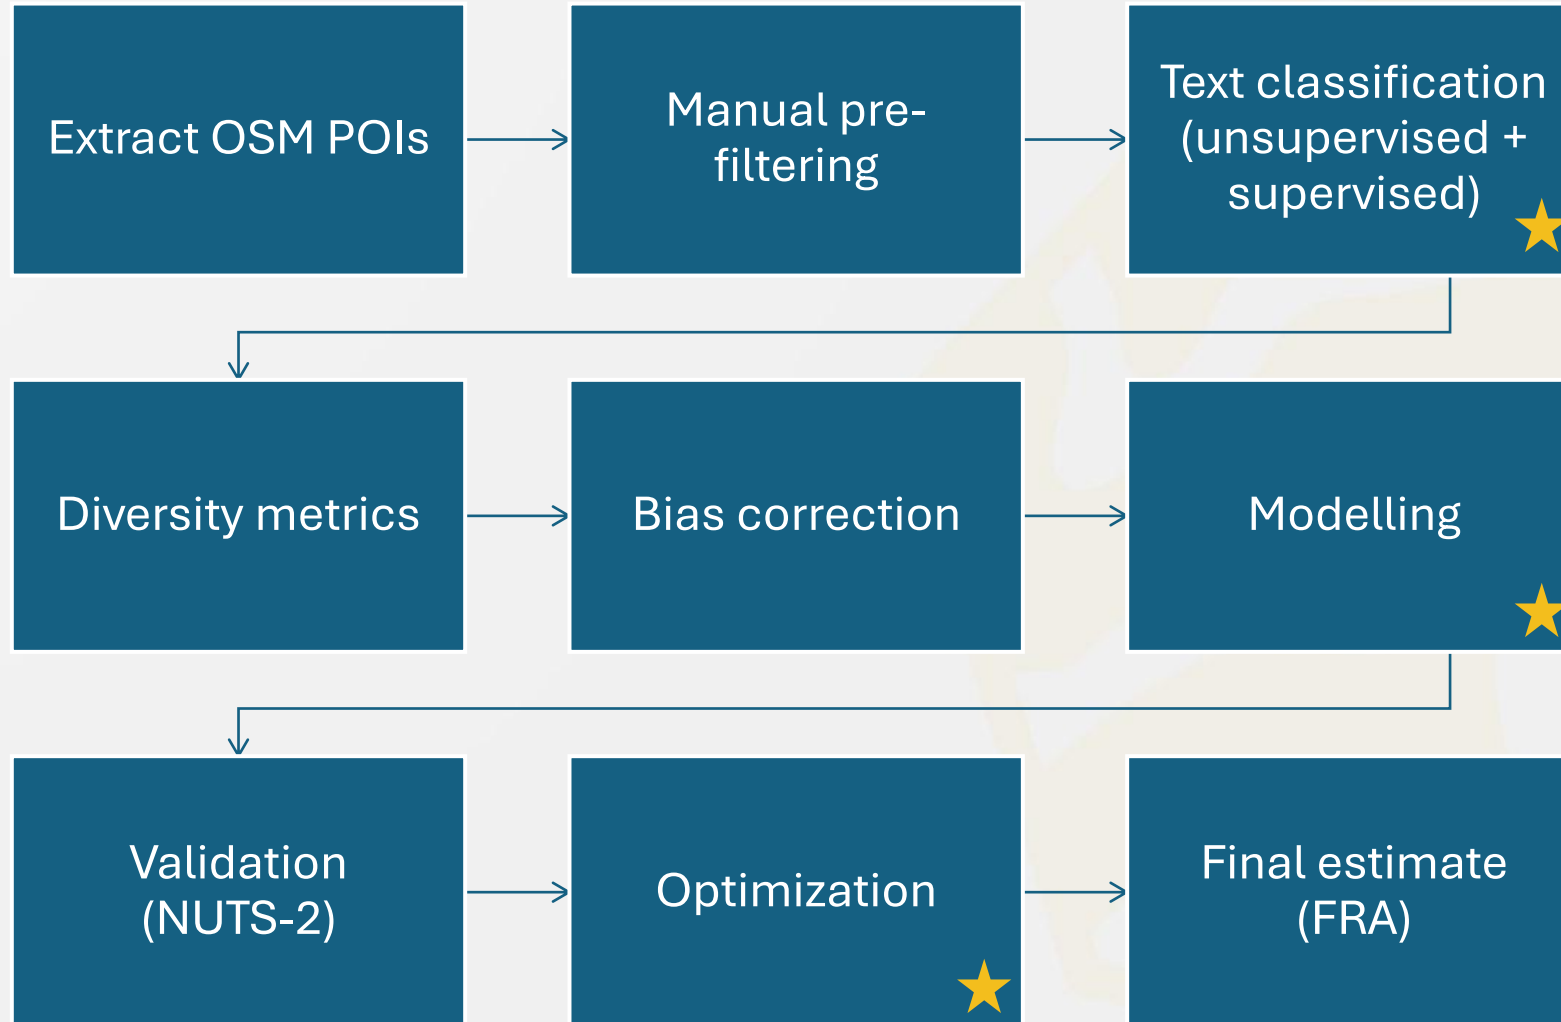

Alternative sources include Microsoft, Esri and Google mapping platforms

Source: Own based on Overture Maps data

MEASURING ECONOMIC DIVERSIFICATION

Methodology

Observed vs GSM predicted: NLP model: gemma2. OSM keys: shop, craft
K-S test: D=0.344, p-value=0e+00. Error Var: 0.001, SD: 0.033

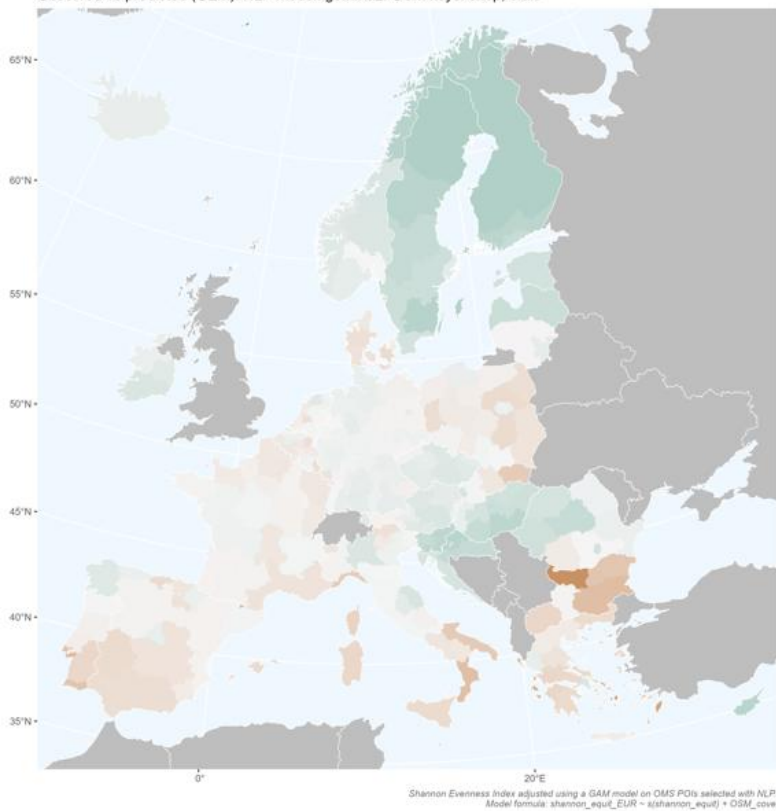

Observed vs GSM predicted: NLP model: gemma2. OSM keys: shop, office, craft
K-S test: D=0.356, p-value=0e+00. Error Var: 0.001, SD: 0.033

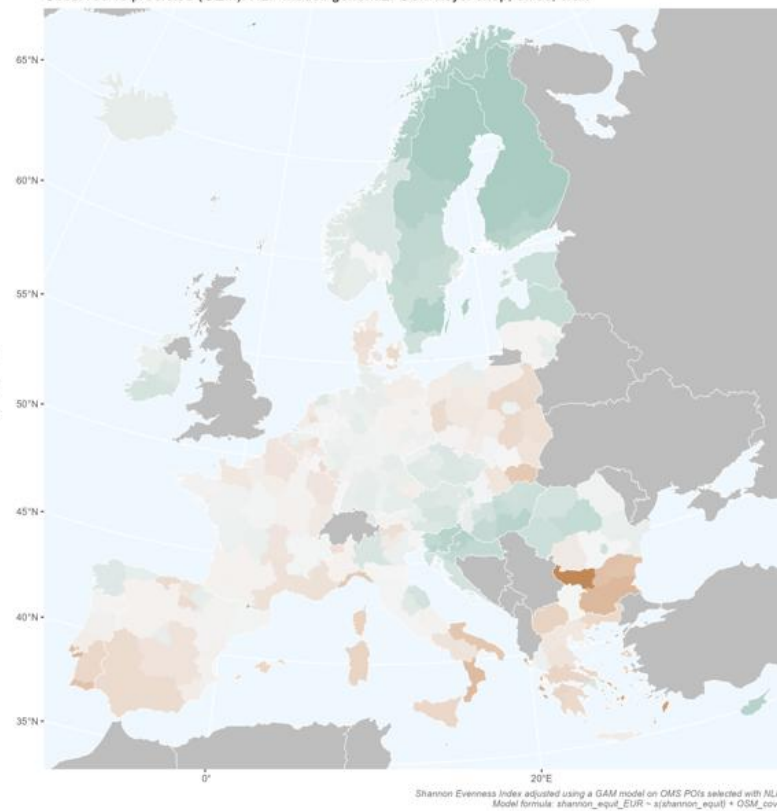

Observed vs GSM predicted: NLP model: gemma2. OSM keys: shop, office, craft, healthcare, military
K-S test: D=0.267, p-value=0e+00. Error Var: 0.001, SD: 0.031

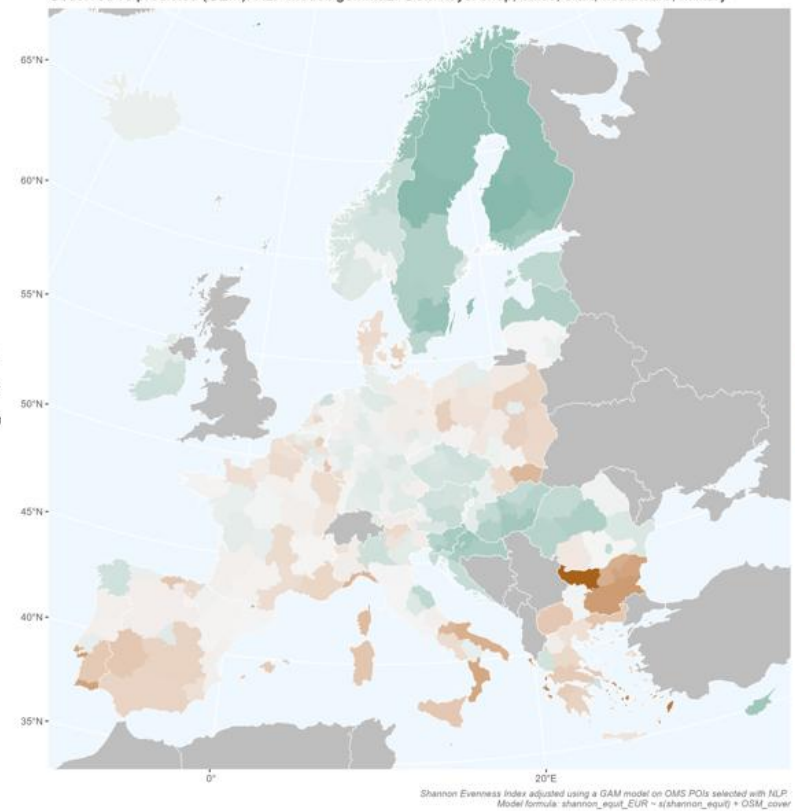

Observed vs predicted (GEM): NLP model: gemma2. OSM keys: shop, craft

Observed vs predicted (GEM): NLP model: gemma2. OSM keys: shop, office, craft

Observed vs predicted (GEM): NLP model: gemma2. OSM keys: shop, office, craft, healthcare, military

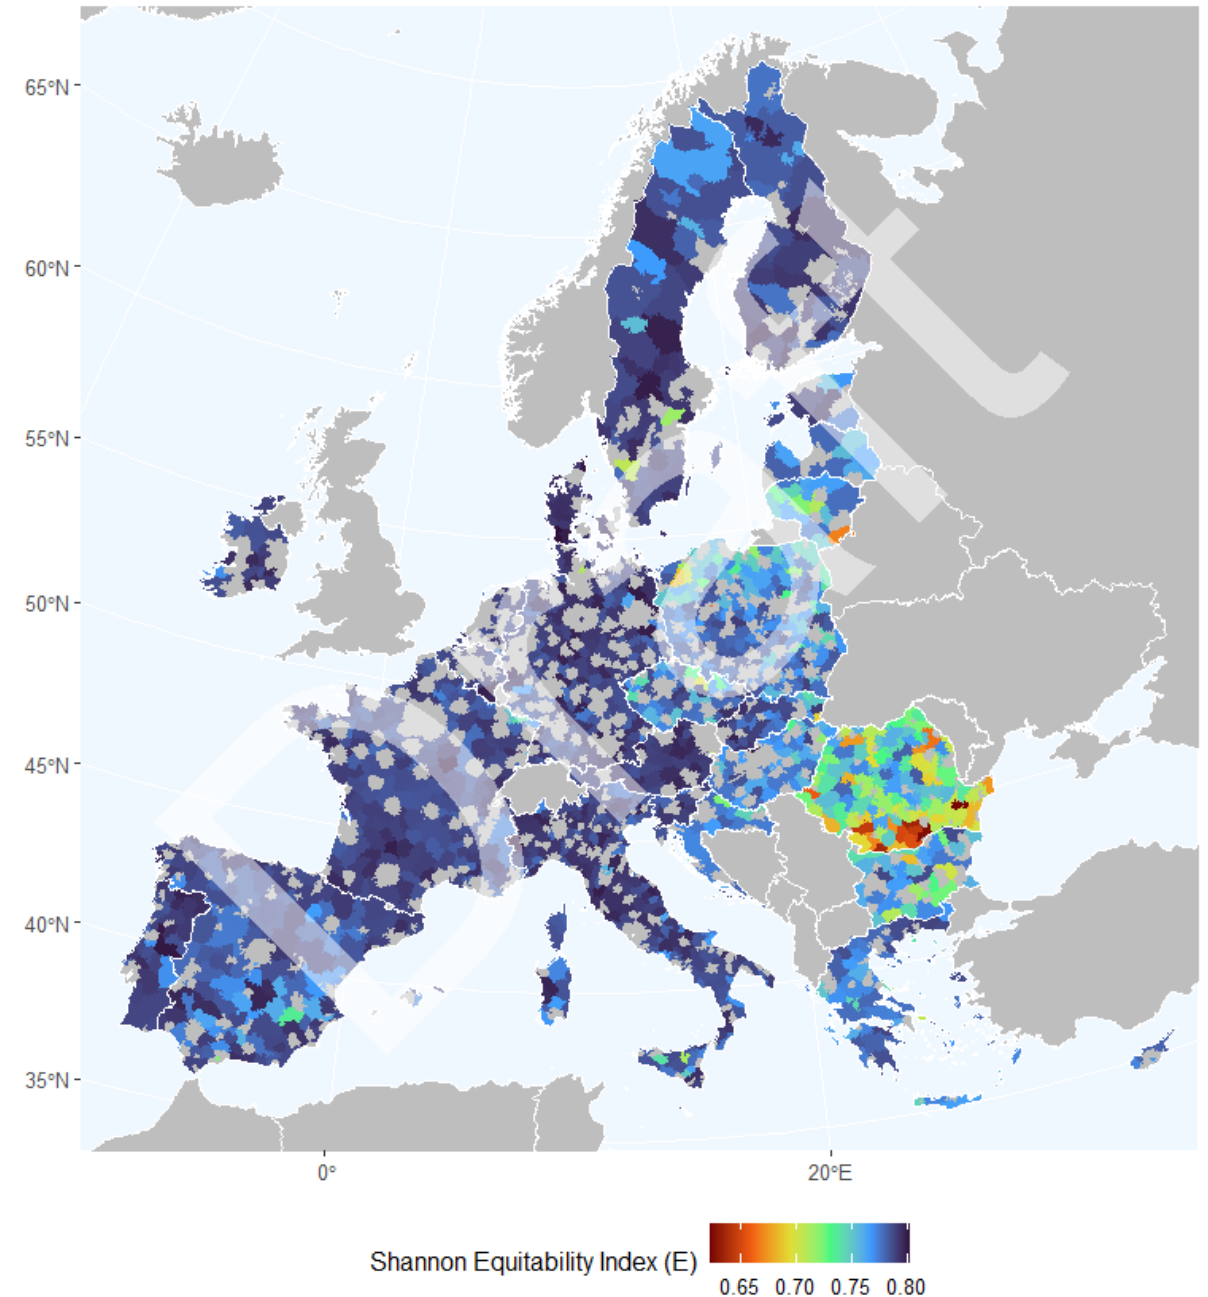

ECONOMIC RESILIENCE IN RURAL AREAS

Take aways

- Diversification is key for economic resilience
- Redundancy is also important
- Data limitations prevent a functional perspective
- OSM data is a precious resource
- ML and AI are very useful to classify text
- Preliminary results are promising

Predicted Shannon Equitability Index
Functional Rural Area delimitation (50k, 30m-60m)
